SELECTED PROJECT

Team+1: Proactive LLM Assistants for Scientific Discovery **Worcester, MA**

Project Lead *2025 - Present*

- Scientific discovery depends on timely input, but most AI assistants only react when asked, and real-time reasoning is often too slow to help in the moment. This project is to build a proactive LLM assistant that anticipates when to intervene and pre-computes reasoning offline to support low-latency biomedical collaboration.

Data-Efficient LLM Training **Worcester, MA**

Project Lead *2024 - Present*

- Training large language models at full scale is costly, and much of the data used rarely improves performance. This project is to develop a reward-oriented, active-learning-driven framework that selects only the most valuable training data for LLM instruction tuning.

Human-Centered and Multimodal LLM Assistants **Worcester, MA**

Project Lead *2023 - Present*

- Legal reasoning, personalized learning, and creative production each require AI that understands domain knowledge and individual user needs, not just language. This project is to design human-centered, multimodal LLM assistants spanning legal reasoning, personalized tutoring, and camera-controlled movie generation.
